Afmitech involved in solving IBA problems at Geldermalsen

Project

Afmitech Friesland was recently approached by Copier consultancy to solve persistent odor and clogging problems in old IBA systems at Geldermalsen. These old IBA systems do not longer worked properly. The project was also accompanied by Copier consultancy.

Location

These old IBA wastewater treatment units are placed at various locations in the municipality of Geldermalsen.

Technique

Afmitech has chosen to place a IBA Class 1 improved septic tank in front of the wastewater treatment unit. This allows the wastewater to pre settle so the wastewater treatment unit will be loaded less heavy. At these locations using only the improved septic tank, in principle all the legal requirements are met. There is chosen to connect the improved septic tank to the old wastewater treatment unit to optimize the treatment of the wastewater. The CE marked improved septic tanks are supplied by betonputten.nl.
